Summary

The aim of the G4G Project, implemented by COINNTECH is to use take advantage of digital assets in order to share knowledge and build social awareness about factors affecting health, as well as technological, political and economic and development of society. Our series of workshops titled: "The right to self assessment - health awareness in the 21st century" available via the G4G token will allow token buyers to acquire functional knowledge which is crucial at every stage of their life.

The G4G Project implemented by COINMTECH assumes the issuance of about a billion tokens, the sale of which will enable the development and provision of innovative projects and technologies to humanity.

The obtained funds will be invested in innovative projects to which COINNTECH and special purpose vehicles will have intellectual property rights (technologies, patents, know-how), inteded for the further development and commercialization.

The main source of COINNTECH revenues will be the profit arising from the increase in value of the companies being the subject of the investment. In addition, a key source of income will be the share profits from entities in the COINNTECH portfolio, obtained in the production and sale of real goods. At the same time, the COINNTECH model provides fot the possibility of buying G4G tokens from the market.

The idea of ITTO* assumes investing and developing startups with high economic and technological potential and a high degree of social utility. From the idea stage to achieving full economic independence.

At the same time, COINNTECH assumes the possibility of investing in technologies whose development and implementation may seem inconvenient from the point of view of big business and international corporations - including alternative medicine, alternative energy sources, methods of obtaining and treating drinking water and the produciton of healthy food.

This presentation of COINNTECH's investment activities aims to draw the attention of the reader (society) to the innovative potential and social dimension of the projects being implemented. The acquisition of a G4G token is not the same as the acquisition of shares or voting rights in COINNTECH or companies developed by COINNTECH.

A word from our CEO

"35 years spent creating, researching, and implementing innovative technologies has taught us a lot.

However, along with the acquired knowledge came the awareness of how many obstacles inventors face every day on their way to success.

Treated like a madman, the inventor has often virtually no chance of commercializing his creation of a lifetime.

He will not win with a bank official for whom the only safe credit is an unallocated one.

He has no chance to defend himself against the "specialist" evaluating his grant application, who cannot differentiate between an ion and a molecule.

He will not overcome the corporate machine that will stop at nothing if it recognizes a threat to its interests in the invention.

He will not gather the funds to research the properties of the invention, create a prototype, or even patent it on a global scale.

For these reasons, many great inventions will forever remain unaccomplished - at an irreparable loss to humanity.

That is why we created the G4G project - to develop inventions through crowdfunding and democratic and economic evaluation of their potential.

To put these inventions at the service of everyday people."

Remigiusz Szczepaniak
CEO of COINNTECH & G4G

A world without inventions

Have you ever wondered what the world around us would look like without such inventions as the wheel, the motor engine, a lightbulb, medicines, the internet, smartphones or the possibility of treating drinking water? Surely this world would be different - less friendly, gloomy, and more primitive.

Imagine that somewhere there is an invention with similar potential, which, for various reasons, has not been implemented for general use. The reasons for this could be a number of factors - poor presentation of the product by its creator, lack of faith in its potential on the part of investors, lack of communication between investors and the inventor, or protection of the interests of the elite.

The answer to these challenges is us - COINNTECH - a company with 35 years of experience in both; the inventive industry and investing in self-created inventions.

Familiarize yourself with the G4G project - the key to the world of technology - and put trust in us so that together we will make the world a better place by creating digital assets of the future

Pillars of COINNTECH

Unit of Innovation and Implementation Ltd. **INWEX**

It is thanks to this company and nearly thirty-five years of experience in the inventive industry that we know more about new technologies than anyone else. We developed our products from an idea, through to the development stage, implementation, and manufacturing - without using loans, subsidies, or capital of private investors. Today, we want to use our knowledge in the field of protection of human life, health, natural environment by taking advantage of the unique opportunity offered by tokenization and digital assets. We want to share our inventions and the ability to look at the world from a different perspective.

Asset tokenization

The unprecedented opportunity to use a decentralized system of storing and transmitting information offered by a blockchain provides the opportunity to provide the global community with new technology, which can change the world through the eyes of a regular person.

Blockchain allows you to make digital assets available directly to interested parties without the intermediation of brokers, bank decision-makers, officials of investment funds, large financial institutions, corporations, or state supervision.

Knowledge is shared based on a social contract in which both parties know their obligations perfectly, and everything is executed using an internal exchange of ideas, where one party signals a problem and the other party proposes a specific solution.

Real Projects

The technologies selected for implementation by COINNTECH thanks to the sale of G4G tokens is based on many years of scientific, experimental, and development studies confirmed in research conducted by independent scientific units and accredited research institutions. Many of them have also received top prizes at international exhibitions and innovation shows around the world.

(<https://inwex.pl/sukcesy/>).

Inventions – not that simple

The first three projects implemented by COINNTECH entail investments in biotech projects concerned with health and environmental protection.

Nowadays, most inventions are backed by industry giants with adequate financial resources or start-ups that find it hard to make it into the mainstream without proper funding.

Only a few projects manage to attract the right investor to finance the inventor's idea. Even fewer start-ups manage to finish the project, launch it on the market and achieve commercial success.

By creating the G4G model, we want to use our 35 years of experience in invention and commercialization.

You don't have to use blockchain technology to become a pioneer with your idea. Tokenization simplifies the way crowdfunding works, but let's not require everyone to use distributed ledger technology. Let's be honest; it is not needed everywhere.

The model above is currently based on the Ethereum protocol and will eventually be based on our own blockchain (PoS), which, among other things, will confirm transactions between the token buyer and the project under development.

We want to use the hidden potential of inventors who have the appropriate knowledge and ideas but lack the tools and resources to make them a reality.

Come to us with your idea or solution; we will assess its potential and the possibility of development and commercialization.

Our mission & G4G

Our mission

History teaches us that any new knowledge is initially ridiculed, then questioned, and finally takes obvious. Before that happens, however, it may become inconvenient and remain hidden or discredited in the name of protecting the interests of a small group of people, even at the price of human suffering.

The road from the creation of an invention to its commercialization requires not only knowledge but also courage, determination and money.

We aim to help in the commercialization of inventions and ideas good for humanity through the use of digital assets and solidary cooperation of the global community.

G4G

The G4G Project carried out by COINNTECH, based in Tallinn (Estonia), was created in order to use blockchain technology for the practical implementation of works of the human mind. COINNTECH, which implements the G4G project, might be a new entity, but is also built on solid foundations..

IFIA & SPWiR

International Federation of Inventors' Associations

COINNTECH has partnered with the International Federation of Inventors' Association to access and evaluate the merits of technology projects, as well as utilize invention resources from around the world.

The International Federation of Inventors' Association (IFIA) is a non-profit organization of great inventors from around the world. It allows representatives of the invention industry to meet, share experiences and evaluate their projects. The association also organizes annual exhibitions and competitions, where INWEX products have repeatedly won prestigious awards.

Association of Polish Inventors and Rationalizers

The Association of Polish Inventors and Rationalizers (SPWiR) is a Polish counterpart of IFIA, which also appreciated INWEX inventions, and currently conducts close cooperation with COINNTECH. The president of SPWiR is Michał Szota (Scientific Council member) and vice-president Paweł Kamiński (Co-founder and COO).

Business model

COINNTECH is a company with a holding structure, acting as:

- the issuer of utility tokens named G4G, who provides exclusive access to the COINNTECH portfolio and includes the programme: „The right to self assessment – health awareness in the 21st century“ will also include:
 - » participation in webinars by Stanisław and Remigiusz Szczepaniak on the projects listed below
 - » access to publications by, among others, Stanisław and Remigiusz Szczepaniak on the latest technologies of treating cancer and lifestyle diseases, methods of producing healthy food, etc.
 - » acquisition of a mobile application monitoring and supporting the treatment process
- a coordinator responsible for the selection and commercialization of innovative research and implementation projects, as well as technical and legal analyses carried out within individual startups
- a creator of the legal entity (team selection, prototype development, implementation and commercialization)
- a managing body responsible for real collaboration between community members and dependent business entities
- an issuer of utility tokens called G4G, providing

Projects

The envisaged area of COINNTECH activity will focus on:

- pharmaceutical products used in the treatment of lifestyle diseases,
- plant cultivation technology and healthy food production,
- a clinic for chronic and lifestyle diseases,
- technologies for obtaining and treating drinking water,
- biodegradable household chemicals of mass market,
- intelligent waste disposal technology,
- technologies for improving the quality of solid and liquid fuel combustion processes,
- raw materials and precious elements,
- technologies for obtaining renewable and alternative energy,
- other profitable investments in line with the idea of the G4G project.

Aims and objectives

The purpose of issuing and introducing G4G utility tokens to trading is to obtain funds by COINNTECH for the development and commercialization of new technologies and innovative projects of high utility, economic, and social importance. In return, the Buyer receives G4G tokens with specific functional characteristics presented later in this document.

COINNTECH is a holding and investment entity.

The operating strategy of COINNTECH is based on the use of a specific market gap between the creation of an invention and its further development until it presents a measurable financial benefit for a potential buyer or investor. Thanks to us, the inventor will be able to focus entirely on developing the product without worrying about financing. Investors, on the other hand, will find in us a reliable partner that selects profitable investments for them with high potential in the very early stages of development. The experience of COINNTECH in both the invention and investment industry is essential to realize the full potential of the project and obtain maximum results.

FROM IDEA TO IMPLEMENTATION

COINNTECH is the entity responsible for:

- oversight of the correct implementation of the G4G project
- creation or search for new technology with high market or social potential,
- evaluation of commercialization costs,
- creation of a new startup,
- company capitalization,
- implementation of technology into production, its commercialization, and promotion on the market.

COINNTECH will acquire shares or stocks in newly created companies based on ownership or co-ownership, which it will later dispose of at a profit by introducing the companies to the stock exchange or dispose of stocks to a industry or strategic investor.

COINNTECH will thus fill the huge gap that exists in the market between creating an invention and demonstrating its investment potential. Regulations often work against inventors. Startups cannot get listed on the exchange until they generate an operating profit. As this is often an impossible condition to meet, it blocks them from developing their companies.

COINNTECH will use over 35 years of experience in implementing technology „from idea to industry“, gathered by the INWEX company.

The main source of income for COINNTECH will be profit from the sale of shares in developed startups and profit from the production of tangible goods. Profits acquired by COINNTECH can be reinvested, transferred to ongoing operations.

ITTO Platform

The ITTO collection panel is Coinntech's online platform that allows token buyers to create an account via email and social media (Facebook, Twitter, Google), go through the KYC/AML process, and purchase tokens.

The following countries are excluded from the possibility of purchasing G4G tokens: the US and all countries on the July 2021 FATF high risk list, link:

<https://www.fatf-gafi.org/publications/high-risk-and-other-monitored-jurisdictions/documents/increased-monitoring-june-2021.html>

The platform supports the following payment methods:

- » Ethereum: ETH, USDC, USDT;
- » Binance: BNB, BUSD;
- » Bitcoin: BTC;
- » Fiat: Visa, MasterCard

Token buyers can additionally earn by sending out reflinks directing to the platform where the referrer earns 5% from each payment of at least USD 100 made by the referred person, and the referred person receives 5% more G4G tokens for a purchase made through the reflink.

The price of the token in the first pool expressed in euro is EUR 0.12

The buyer of the G4G tokens agrees that their account will be activated as soon as possible after payment is credited and understands that after activating the account, reimbursement of the "Right to self assessment - health awareness in the 21st century" course costs will not be possible - in accordance with § 4 of the Course Regulations and Consumer Rights (art. 38, point 13).

Token economy & User Panel

Token economy

Technicalities of token G4G:

- Token name - G4G
- Symbol - G4G
- Platform - Ethereum - ERC20
- Number of all tokens - 1 000 000 000
- Token emission – specific to each project stage
- Smart contract address `0xcCA2bA56667109512575a196A8AA8D920F63aCCe`

By law, the following jurisdictions will be excluded from use:
the USA, and any country on the FATF high risk list.

User Panel Features

Registration panel for the collection

Panel description

ITTO collection panel – this is a panel where you can buy tokens. Before you enter the panel on the page, a pop-up will appear that will provide a description of the project. Then the user will be able to click „Register for ITTO“, where the registration form for ITTO will appear.

Registration process

In order to register for the ITTO, the user is required to fill out a form in which he provides his/her email address, password, and then reconfirms it. The person must also indicate that they accept and agree to the Data Security and Privacy Policy terms and conditions.

Login process

In order to log in to the panel, it is required to enter the email and password provided during registration.

Payment methods

The platform allows payment by the following methods:

- Ethereum: ETH, USDC, USDT;
- Binance: BNB, BUSD;
- Bitcoin: BTC;
- Fiat: Visa, MasterCard

Functional qualities of G4G token

The G4G token is a utility token, available for purchase as part of the first-ever digital assets issuance of Initial Technological Token Offering carried out by COINNTECH.

By purchasing G4G, you receive:

- discounts - the G4G token gives you access to all products and services offered on the www.coinntech.io website on exclusive or preferential terms,
- access to training programme "Right to self assessment - health awareness in the 21st century".
- priority to acquire G4G tokens in subsequent pools,
- possibility of using on preferential conditions services offered by COINNTECH - including inDEX and currency exchange. - Payment for services provided by COINNTECH with G4G tokens entitles you to a 30% discount.

Sample value of service/goods (G4G)	Calendar year
1000	2021
950	2022
900	2023
850	2024
800	2025
750	2026
700	2027
650	2028
600	2029
550	2030
500	2031

COINNTECH's Buy Back policy allows it to use funds from earned profit to buy back G4G tokens from the market.

The project reserves the right to Snapshot holders' wallets once a quarter.

Access to all applications, services, information services, webinars, and trainings offered by COINNTECH provided purchasers of the G4G token will be available to them from the second quarter of 2022 and successively developed throughout the life of the Project.

** The table above illustrates the details of our client loyalty programme.*

Issuance

The mechanism of introducing G4G tokens to the market

The G4G utility tokens will be introduced to the market in stages, under projected pools in years 2021 - 2035, under the policy of COINNTECH.

Each pool assumes the division of G4G tokens according to the following parity:

- 70% - pool intended for sale and increase of our flow and buyback
- 20% - current and future members of the company
- 5% - marketing and administration
- 5% - liquidity reserves of the company

At the same time, current and future members of the company, who will acquire G4G tokens from the 20% pool provided as a bonus to current and future COINNTECH employees, will have the right to sell no more than 10% of the tokens held in the first year after their acquisition and another 10% in the second year.

All users of G4G tokens purchased from the pool of 70% of tokens allocated to free circulation will have the right to freely trade them or use them for their intended purpose. At the same time, holders of G4G tokens purchased during the first and subsequent pools will have the right to priority in the purchase of G4G tokens in subsequent pools on preferential terms.

Additionally, the policy of introducing G4G tokens to the market during Stage I assumes:

The funds, which are planned to be obtained in the amount of approximately EUR 12,000,000, will primarily be used for activities in the area of:

- Investments in the development of three target projects - investment in selected target projects allows for their dynamic development, increasing the level of technological advancement to increase their value and further commercialization of assets.
- Development of IT, technical, and management infrastructure of COINNTECH.
- Marketing work carried out in the field of promoting the G4G project, increasing public awareness of targeted projects implemented under G4G, and disseminating information about the G4G token.

The next stages of introducing G4G tokens to the market will continue until 2035, depending on the demand for the projects from page 14. Subsequent issues will be preceded by earlier information posted on www.g4gcoin.com & www.coinntech.com.

The next stages of introducing G4G tokens to the market will be related to investments in specific innovative projects that must first be approved by the Management Board and the Scientific Council of COINNTECH as to the:

- current value of the portfolio of assets owned by COINNTECH
- planned increase in the value of the portfolio of assets owned by COINNTECH, achieved thanks to the gradual introduction to the market of a new pool of G4G tokens
- purpose of introducing a new pool of G4G tokens to the market
- quantities and values of G4G tokens introduced to the market

After reaching the maximum limit of tokens to be introduced to the market, 1,000,000,000 G4G units, new G4G tokens will no longer be issued.

Projected issue and stages of introducing token to the market

The G4G project assumes a one-off issue of 1,000,000,000 (one billion) G4G utility tokens and their phased introduction to the market (pool), depending on the demand for funds necessary for the development of technological projects.

Stage I, Q'3 2021 – Q'2 2022, involves the introduction to trading of 200,000,000 to 300,000,000 (from two hundred million to three hundred million) G4G tokens at the unit price:

- € 0,12 (twelve eurocents) for one G4G token – when buying between € 100 and € 500 (from one hundred to five hundred euros)
- € 0,10 (ten eurocents) for one G4G token – when buying over € 500 (five hundred euro)
- € 0,09 (nine eurocents) for one G4G token – when buying over € 5000 (five thousand euro)
- € 0.08 (eight eurocents) for individual buyers

At the same time, the regulations for the issuance and introduction to trading of G4G tokens do not allow for a single purchase of G4G tokens to be lower than € 100 (one hundred euro).

The introduction of G4G tokens during Stage I entails:

Pre-sale of G4G tokens via the company's own sales platforms www.g4gcoin.com and www.coinntech.com.

The pre-sale of G4G tokens via centralized and decentralized exchanges.

Token model

The value of the G4G token will be determined based on market analysis and will be made public 30 days before each planned addition to the market.

At the same time, the Issuer assumes that the funds obtained from the issue will be used as intended – that is, to finance the development and commercialization of innovative projects of high economic and/or social importance.

Therefore, each pool will depend not on the number of G4G tokens introduced to the market; but on the number of funds planned to be obtained – necessary for the development of innovative projects. Thus, in a situation where the sale of a smaller number of G4G tokens will obtain the planned amount, it will be tantamount to closing the pool. Moreover, all G4G tokens planned for introduction to the market; that will not be introduced to the market until 2035; will be burned.

After 2035, the company's operations will continue thanks to the disposal of assets and reinvestment of profits in new innovative projects in order to optimize the portfolio. Such a policy of closed issue of G4G tokens and reducing the number of available G4G tokens on the market by purchasing the tokens from financial surpluses generated by COINNTECH will ensure the deflationary nature of the G4G token.

Roadmap

Stage One (Q3 2021)

- Registration of COINNTECH in Estonia
- Legal consultation, specialization Blockchain and crowdfunding
- Choice of purchasing platform - contract signing
- Choice of KYC operator (AMDL5) - contract signing
- Creation of a deflation token (ERC20)
- Formation of a team based on own associates and specialists from medical and blockchain industries
- Preparation and publication of G4G website with the presentation of medical projects
- Signing an agreement with the International Federation of Inventors' Associations and SPWiR
- Preparation of social-media channels (FB, LinkedIn, Twitter, Telegram)

Stage Two (Q4 2021)

- Launch of the world's first ITTO - white list
- First, private pre-sale round, limited quantity of tokens with purchase bonus (Pre-sale)
- Start of the marketing campaign
- Transfer of purchased tokens to buyers' wallets
- Start of the educational campaign
- Overview and application to cryptocurrency exchanges
- Coinmarketcap, Coingecko, Coinpaprika application

Stage Three (Q1 2022)

- Start of implementation of first medical project - oncological project TGS
- Educational campaign - cancer free
- AIM FOOD
- A Clinic for Chronic and Lifestyle Diseases

Disclaimer

The information provided on this site does not constitute an offer or investment, financial, trading, or any other, and the user should not treat any of the site content as such. Coinntech does not recommend buying, selling, or holding any cryptocurrency. G4G tokens issued under the ITTO are not financial instruments. The buyer should conduct his own due diligence or consult his financial advisor before making any investment decisions.

COINNTECH will strive to ensure the accuracy of the information provided on this website, although it will not accept any liability for any missing or incorrect information. COINNTECH provides all information as is. The use of any information available here is at the user's own responsibility. Participation in ITTO is a high-risk activity. Our offer is directed to individuals with relevant experience, familiar with Blockchain technologies.

Participation in ITTO involves acceptance of security risks and potential financial losses. The buyer declares that they are aware of the legal uncertainties associated with such services and that they have conducted their own research of the legal compliance of the services offered by COINNTECH.

G4G tokens enable the use of COINNTECH's established services. The purchase of G4G tokens should be made with an awareness of the technological and economic uncertainties of the project outlined in this Whitepaper. In case of failure or non-performance of the project and in case of decrease or even total loss of value of G4G tokens, the participants are denied any legal action against COINNTECH.

During ITTO, the company is not responsible for any of the following:

- Failure, error, malicious activity, or violation of Whitepaper rules by the user or service controlled by you or a third party;
- Use of the service in violation of the applicable terms;
- Loss of control of user's login information, regardless of the reason (loss, hacking, unwanted disclosure or technical failure), which may lead to fraudulent use of tokens;
- Any direct or indirect damage that may occur during the operation: cryptocurrency losses, financial gains or losses, or other such damages;
- Temporary or permanent suspension of the service for any reason, especially at the request of public authorities, judicial authorities or a third party;
- Computer failure related to data loss, including the case of percussion;
- Professional activity of users.
